CHC Japan K.K

Company Description

As part of the clean energy transition, electricity markets and networks globally are experiencing an increase in volatility due to increased renewable energy penetration, fluctuation in input costs and increased public investment requirements in transmission & distribution assets.

Fast response flexible storage assets, such as Battery Energy Storage Systems (BESS) can contribute to solving these problems.

CHC was therefore conceived to:

- Build a global leading energy storage development and electricity / power data management company

- Develop, design, construct and operate BESS projects

- Through its operations, optimise electricity data collection, data processes, AI system innovation & development to maximise the value of energy storage assets.

CHC is a leading pure-play BESS project development and electricity data management company. With our dynamic team and the depth our shareholders bring, we are passionate about driving the energy transition and the revolution of energy networks.
