募集要項

Senior Quality Automation Engineer / SDET — Japan

A growing global technology company is looking for a **Senior Quality Automation Engineer / SDET** to join its engineering organization in Japan.

This is an opportunity for someone who wants to go beyond traditional QA execution and have meaningful ownership over **test automation, quality engineering, and engineering practices** .

What you'll do

- Design and build scalable automated testing frameworks
- Drive Shift-Left quality practices across the software development lifecycle
- Develop automated tests across web applications, APIs, backend services, mobile, and AI-powered features
- Integrate automated testing into CI/CD pipelines

- Help develop approaches for testing and evaluating AI/LLM-based functionality
- Establish quality metrics and contribute to engineering-wide quality standards
- Lead exploratory testing, defect investigation, and root-cause analysis
- Collaborate closely with engineers and product teams to improve overall product quality

Technical environment

- Modern browser automation tools
- TypeScript and/or C#
- API testing
- CI/CD
- Cloud infrastructure
- Microservices
- AI/LLM technologies

Why this role?

- Significant technical ownership and influence
- Collaborate with international engineering teams
- Work on quality engineering for AI-powered features
- Help establish scalable automation and quality practices
- Opportunity to shape how quality engineering is approached within a growing organization

What we’re looking for

- 5+ years of experience in software testing or quality engineering
- 3+ years of experience building or designing test automation frameworks
- Strong experience with modern test automation tools
- Solid API testing experience
- Hands-on CI/CD automation experience
- **Business-level English**
- **Conversational Japanese (JLPT N3)**

Experience with AI/ML/LLM testing, mobile automation, performance/security testing, or SaaS products is a plus.
