募集要項

About the role
Join an international robotics technology company working to automate demanding warehouse operations. You will design, implement and deploy network environments that support robotics products at customer sites across Japan.

Key responsibilities
• Design, implement and deploy networks for robotics products

• Work with project managers and customers to define network and communications requirements
• Coordinate vendors and plan and supervise communications installation work
• Lead on-site system deployment at locations where robots operate
• Support the operation of the company’s internal network

Location: Koto-ku, Tokyo
Employment: Permanent, full-time
Salary: ¥5,000,000–¥10,000,000 per year
Work style: Flex time
Domestic travel is required.

スキル・資格

Required
• At least 3 years of relevant network engineering experience
• Knowledge of IP addressing, DNS, DHCP and related network protocols
• Working knowledge of Cisco IOS
• Experience designing and implementing 2.4 GHz / 5 GHz wireless networks
• Experience designing and implementing firewalls
• Troubleshooting skills using tools such as Wireshark, traceroute and netcat
• Ability to perform hands-on technical work, proof of concepts and demonstrations
• Native-level Japanese and business-level English
• Available for domestic business travel
• Knowledge of applicable regulations for on-site implementation, including construction and radio laws

Preferred
• Linux fundamentals
• Automation experience using Ansible or Python
• Experience selecting and procuring network equipment or servers
• Experience in logistics, IT or telecommunications
• Ability to work flexibly in a startup environment
