募集要項

Java Developer

We are currently representing a well-established US software company with a long-standing presence in Japan.

The company develops mission-critical enterprise platforms used by major corporate customers globally and is expanding its engineering team as part of its next stage of growth.

This position offers the opportunity to work within an international engineering environment while contributing to a large-scale enterprise platform that serves real-world business operations.

Key Responsibilities

• Design, develop, and enhance Java-based business applications

• Maintain and improve existing services and platform functionality

• Investigate incidents and perform root cause analysis

• Implement preventative measures and platform improvements

• Troubleshoot technical issues raised by internal teams and customers

• Participate in modernization and platform transformation initiatives

• Collaborate with engineering teams across multiple locations

• Review and utilize English-language technical documentation

What Makes This Role Attractive

• International working environment

• Hybrid working style

• Stable and profitable software business

• Enterprise-scale systems used by major customers

• Modernization and transformation projects

• Long-term career growth opportunities

• Exposure to global engineering teams

Location

Tokyo (Hybrid)

Employment Type

Permanent

スキル・資格

Required

• 3+ years of software development experience

• Java development experience

• Experience supporting and maintaining production systems

• Experience with troubleshooting and incident investigation

• Experience developing enterprise applications or SaaS products

• Strong problem-solving skills

• Business-level Japanese and English

Preferred

• Spring Framework / Spring Boot

• JavaScript

• Cloud platform experience

• Enterprise software development experience

• Customer-facing technical support experience

• System modernization or migration project experience
