

## Future Fertility Ltd

---

### 会社説明

#### **Change is inevitable. Progress is optional.**

We have developed the first Artificial Intelligence image analysis tool to non-invasively evaluate oocytes (eggs), creating the only objective classification and prediction tool Violet™ for an oocyte.

Insights yielded by our patented software technology will be invaluable to patients, clinicians, and researchers. We are actively applying our AI solutions to numerous clinical applications in the field of reproductive medicine, including an enhanced non-invasive assessment tool for embryo quality and endometrial receptivity assessment based on ultrasound images.

### Products

#### **Oocytes Prediction / Classification**

- Accurate prediction for egg
- Patient feedback in IVF cycles and social egg freezing
- Standardized scoring system to facilitate research in improving egg quality
- Available commercially

#### **Embryo Predictions**

- Non-invasive assessment
- Improving success rates per transfer
- Decrease twins (single embryo transfer)
- Healthier Pregnancy outcomes

#### **Uterus Lining Classification**

- Prevent transferring embryos at non-ideal time
- Improving success rates per transfer
- Decrease twins (single embryo transfer)
- Healthier Pregnancy outcomes

#### **Quality control is critical for a successful IVF lab.**

Artificial Intelligence will inevitably improve outcomes through automation, objective diagnostics and enhanced decision making – all of which are subject to inherent subjectivity, biases, and limitations when performed by a human.

### For Clinicians

Doctor + AI = Best Possible Outcome

New tools to help clinicians and embryologists to personalize care and as a result improve outcomes.

### For Patients

Everyone's bodies are different and your personalized information is critical for your doctor to make the best individualized treatment plan for you.

By having the option to get deeper information on not only your embryo but also your eggs, we're armed with more information to give you options and make the right decisions for your care.
