Vector Renewables Japan KK

Company Description

We manage renewable assets and support investors with our technical, financial and legal expertise.

15 years growing in the renewable energy industry and with services provided in more than 40 countries.

Services
Vector Renewables covers the complete life cycle of a project through its four main service lines: asset management, technical, financial and legal advice.

Asset Management

- Commercial Asset Management

Managing every aspect related to the Project Company or SPV during the development, construction and operation of the renewable energy asset with the goal of assuring compliance of the project company with its contractual, legal, tax, administrative, mercantile and environmental obligations.

- Technical Asset Management

Supervising the operation in order to coordinate and verify the compliance of obligations by all third parties involved in the facility.

- Perfomance and optimization analysis

Specialized services aimed to assuring maximum control of the facilities, optimize their maintenance and maximize their performance.

- Diagnostic, inspection and analysis services

Diagnostic activities aimed to assessing the operational condition of a given solar PV or Wind facility.
