

RSI K.K.

## Company Description

### Optimal Solutions with Integrity

RSI provides consulting services in the two main areas of data center services and IT and facility operations management. We offer expert analysis covering all stages of a project life cycle, from initial planning to construction, management, and maintenance, providing services in the two fields of project management and managed services to fit client needs. We are committed to leading our client's businesses and projects to success.

#### ▽Data Center Consulting

##### < Data center specialist >

Data centers now play a crucial role in enhancing efficiency or addressing environmental issues in this rapidly diversifying business environment. As a growing number of companies in Japan show interest, the outlook is that there will be an increasing demand for data center services. But in fact, there are still few experts and companies actually capable of providing professional services as data center specialists. Since establishment, RSI has been providing consulting services for data center structuring, design, and operations, meeting various needs of clients in Japan and abroad. We have the experience and expertise as a data center consulting firm, offering quality services and total support for our clients in the following areas.

#### ▽IT Facility Management Consulting

##### < Operations professionals >

Since establishment, RSI has been offering a wide-range of consulting services centered on coordination between IT and facilities that accompany office relocations or systems integration for clients in Japan and abroad. Based on our extensive experience and expertise, we provide services in the following areas as professionals of operations services. We help our clients succeed by addressing diverse business needs that arise from initial project planning to completion.
