

TOPCON CORPORATION

Company Description

We will continue to challenge ourselves to enrich the lives of people around the world with leading-edge digital transformation solutions.

We will accelerate our growth strategies based on the philosophy of Topcon that contributes to enrichment of human life by solving the societal challenges within healthcare, agriculture and infrastructure.

Since our founding in 1932, we have developed our business globally with a focus on businesses related to surveying instruments and ophthalmic medical devices, leveraging our strengths in precision optics and optomechatronics technologies.

In 1994, with the M&A of a U.S. technology venture company, we came up with the concept of "Automation of construction process," which no one had thought of at the time.

This was a turning point, and we promoted M&A of various overseas technology venture companies. We have been shifting to a company that proposes solutions for healthcare, agriculture, and infrastructure. We will continue to take on the challenge of creating new value as a "venture company with a 90-year history."

In addition, since we are developing our business in the essential fields of "healthcare, agriculture, and infrastructure," which are essential to society, our business itself is linked to social contribution activities.

From the perspective of ESG (Environment, Society, and Corporate Governance) and Sustainability, we will solve not only societal challenges related to healthcare, agriculture, and infrastructure but also global issues in consideration of the environment and society.
