

Software Engineering Co.,LTD

Company Description

"IT and English"

Our strength lies in dispatching interpreters, translators, and computer engineers, focusing on language-related jobs.

We respond to customer needs by dispatching interpreters, translators, and engineers with "IT and English" as keywords.

A large number of human resources such as specialists, interpreters, translation checkers, DTP operators, localization engineers, software developers, and test engineers who need languages are registered. We are different from the major temporary staffing companies that are mainly office work.

In particular, we have a large number of female language staff members in their 20s and 30s who are dispatched not only in Japan but also overseas such as the United States, the Netherlands and France.
