DARE Japan Inc.

Company Description

As a base of research and development of “DARE AUTO” in Japan,
a core business of Chinese major technology corporate group “DARE GROUP”,
DARE JAPAN has been established on May 2018.
With a stance centered on all-solid type battery, DARE JAPAN has been working on development of fuel cell for automated driving.

Introduction of research & development activities
With an intention to take advantage of products based on Japanese excellent technologies for market deployment in China, Europe and North America where Dare Group is operating, DARE Japan has been founded in Tokyo on May 2018.
We have been working on management of cooperative projects between Japanese corporations and universities, while proceeding with practical development at in-house research & development center.

Main development theme :

- **All-solid type battery development**

In cooperation with excellent material equipment firms in Japan, development of all-solid type battery has been underway. Led by the research and development center in Japan, the whole DARE Group has been working on the development including battery simulation at Research and Development Center in the U.S., film formation at a Chinese subsidiary of optical communication device, and battery materials procurement in China.

- **Development of Fuel Battery Cell/Stack**

We proceed with fuel cell stack development collaborating with remarkable material and equipment companies in Japan as well as a subsidiary of fuel cell in the U.S.
