# Autify, Inc.

## Company Description

**Faster Release Cycle　AI-Powered Software Test Automation**
No more time wasted on manual testing, automated test creation, and maintenance.

- **Test Generation Made Easy**　Even beginner testers can create and automate testing by interacting with the browser in a way that you want the test to go. No programming knowledge or coding required.
- **Swift Release**　Autify quickly automates E2E tests and executes them in multiple browsers. Give yourself a competitive advantage by accelerating each release's QA process, improving quality, and increasing release frequency.
- **Reduce Costs with AI**　AI monitors UI change at the time of release, and automatically updates the relevant Test Scenarios. Say sayonara to manually fixing each Test Script.

＜**Autify's Robust Features**＞

- **Cross Browser Testing**　Autify supports PC browsers as well as mobile browsers. This eliminates the need for managing and maintaining real devices. There's no need to manage device farms either.
- **Email Testing**　Autify can be used to check transition tests and the contents of emails, such as new user registration and confirmation emails after a purchase. There's no need to prepare an email inbox environment just for testing.
- **Local Replay**　Run and edit Test Scenarios on the browser during the creation process to confirm that the test works correctly.
- **Parallel Execution**　Execute multiple tests at once. The number of simultaneous executions is customizable.
- **JavaScript Step**　Limitless customizability with coding. Combining custom codes with arguments opens the door to flexible Test Case generation.
- **Step Group**　Use the same action in multiple Test Scenarios? Repeating the same action in a Scenario? Organize them into Step Groups for easy test management.
- **Service Integration**　Integrate with services you already use. Implement seamlessly. CircleCI, Jenkins, Webhook, TestRail, and Slack are all supported.
- **User management (Comming soon)**　You can register an unlimited number of users. Each user can be assigned viewing/editing/managing rights for each organization/project.
- **Visual Regression (Comming soon)**　UI changes frequently as development gets faster. Autify's Visual Regression feature will automatically spot differences and run tests without maintenance.

## Company Details

**Head Office**
Japan

**Main Business**
ソフトウェアテスト自動化プラットフォーム

**President**
近澤 良
