SYSCOM GLOBAL SOLUTIONS

SYSCOM GLOBAL SOLUTIONS INC.

Company Description

SYSCOM GLOBAL SOLUTIONS INC. is a leading global, full-service digital & IT support and solutions provider.
We provide solutions that are the best fit for each of our customers regardless of their future plans, the challenges they face, or where they are around the world.

We work closely with our customers to better understand their business. This understanding helps us solve their immediate technology needs, improve the efficiency of their operations, expand their business, and facilitate their globalization efforts.

Our Areas of Expertise
Solutins
Our wide range of solutions help companies of all sizes improve their operations, increase their security, and expand their business globally. These solutions include everything from Global ERP to RPA, CRM, AI/IoT, IT Security and Cloud.

- **Global Digital Solutions**

Our cutting-edge digital solutions empower the world's leading companies to expand across the globe while continuing to operate at the highest level.

- **Digital Transformation**

Now more than ever, digital transformation is what drives business growth. To help companies with this transformation, we start by analyzing your business needs. Then, we identify the way to best accelerate your company's growth, whether it's through AI, Mixed Reality, RPA, or another leading technology.

- **Global ERP**

We help companies implement an ERP system so they can integrate their data and information across departments and establish a single, real-time view of all aspects of their business.

- **Cloud Solutions**

Operating in the cloud has become essential for successful businesses today, but the cloud can also be challenging to manage. Our cloud experts simplify and optimize complex cloud infrastructures to provide companies with secure and solid private and public cloud solutions for all kinds of business needs.

- **IT Security**

IT security is a global issue faced by every business. What's more, security incidents can be enormously expensive. We adapt the latest security approaches, including a "zero trust model" to detect threats and protect businesses. Our security experts and our incident response team will help protect your data and employees from known and unknown threats.

Services
We provide technical support and managed services to help companies run seamlessly across various departments, multiple platforms, and international borders. These managed services include everything from ERP service, managed security, managed cloud, technical account management, and system operation/management.

Consulting
Our experienced consultants provide technology solutions that help companies spot new opportunities and solve their biggest challenges. They are experts in everything from strategy to managing system operations.
