Tex Technology Inc.

Company Description

As the leading company in Japan
Tex Technology is a group of professionals leading the copper foil manufacturing industry in Japan.

We comprehensively possess the know-how of copper foil manufacturing, ranging from all the equipments required to manufacture copper foil such as titanium electrodeposited drums, foil making machines and surface treating machines, to electrolytic solutions, additives as well as technical consulting for not only product quality improvement but RD field as well. We provide our wide array of customers including investors, copper foil manufacturers and copper foil users our know-how along with the abundant insight and market information accumulated over the years.

Business Introduction
The sales of manufacturing equipment for high-grade rolled copper foil and electrolytic copper foil which are indispensables for the recent electronic industry and its peripheral products as well as various consulting services.

Copper foil is an indispensable material in the current electronic industry. As a result of the recent rapid technology innovation, higher grade copper foil is under high demand in various areas of the electronic industries. For example, conductive material for circuit boards, current collector for lithium-ion batteries and shielding material for displays.
In the recent years, electric cars are especially under the spotlight given many countries' shift to clean energy from traditional energy. The demand of copper foil is rapidly increasing given that it is used in the lithium-ion battery which is one of the most important components of electric cars.

- Electrodeposited Copper Foil Manufacturing Equipment
- Production Process of Electrodeposited Copper Foil
- Application of Electrodeposited Copper Foil
- Cathode Drum
- Anode Plate/Bath and Other Copper Foil Manufacturing Equipment
- Surface Treater

CONSULTING
Tex Technology offers not only just supplies technology for products and equipments but also offers consulting service that coherently supports from development and manufacturing all the way to market development.

As a leading company in the industry that has been active in the front lines for many years, we offer optimized advice to wide array of client needs, for example market conditions such as current market demand, assistance in manufacturing even higher quality products or assistance in procuring copper foil which has been under consistent shortage.

Company Details

Head Office
Japan

Main Business
銅箔製造

President
吉田 哲朗

Established
2002年6月4日

Number of Employees
11 - 50
