

 **DentalMonitoring**

## Dental Monitoring SAS

---

### Company Description

#### We help dental professionals do more, virtually

In 2014, we started DentalMonitoring with the vision to help the dental industry automate and virtualize everything outside of the clinical side of care.

#### What have we achieved since then?

We're now the leader in AI-based solutions that empower orthodontists to expand their practice into a virtual environment.

Our proprietary AI (built by processing over half a billion photographs — creating the industry's largest image database) can analyze, detect and report on 130 oral events using images taken with a smartphone. Simply put, our AI is an industry game-changer.

From virtual consultations, to ultra-realistic simulations and remote treatment monitoring, we're helping forward-thinking providers simplify their lives and revolutionize the industry.

#### Our mission

DentalMonitoring is committed to empowering dental professionals with AI-powered solutions that help them provide more frequent, individualized patient care, virtually.
