

PELLENC ST Japan

Company Description

Together, let's build the circular economy of tomorrow

Pellenc ST, intelligent and connected sorting for the recycling industry

Two fundamental principles: People and Innovation

Our vision is simple: we wish to make the Circular Economy sustainable and profitable by offering innovative solutions for intelligent and connected sorting lines.

With steady growth and stable share-ownership, we are continuing to drive our business forward by reinvesting most of our profits in R&D and the development of new services. As such, over a third of our teams are currently working on future solutions, with the primary objective of optimising the performance of our customers.

A culture rooted in the very DNA of our company

A visionary entrepreneur, our founder Roger Pellenc invested us with his support and a vast array of experience acquired in the development of Pellenc SA. He left a unique corporate culture based on Environmental commitment, Technological innovation and the Implication of all.

Since 2013, a new dynamic has been instigated with the change in governance and the arrival of Jean Henin, now the majority shareholder of the company and guarantor of its independence. Pellenc ST is now developing at a sustained pace and deploying an ambitious strategic plan, "We Are 2025", aimed at consolidating its status as mid-sized company (ETI) and accelerating its growth.
