

TOYO KENSETSU KOHKI CO., LTD.

Company Description

As a specialized manufacture of rebar processing machines, we continues to develop and provide the technology that meets the needs of the times.

It has already been over 60 years since we started our business as a specialized manufacturer of rebar processing machines. We would like to express our hearty gratitude for the continued support tendered by our stake holders.

History of rebar processing machines is also the history of us TOYO. We have been endeavoring all together not only to develop and provide the technology of the needs of the times but to respond to various needs.

The level of requirements in the market has been raised, such as powerful machines, automation, systemization, unmanned operation, and realization of more comfortable workplace. The bar has been raised: the tasks assigned to TOYO, an industry pioneer, have been more challenging with the times. It can be truly said that our accomplishment of the challenging tasks have brought the strong mind, the mind to open up the future, to all of our staff members.

It cannot be said that the 21st century is an easy era to survive even for a long-history company. The era requires more trial and error. We will continue to value close communication with clients, suppliers and all the stakeholders, and will make a fresh start for the creation of required "Technology", acceptable "Products" and trustworthy "Enterprise" and for creation of new TOYO.
