Toku Pneumatic Co., Ltd.

Company Description

Quality first is the policy we will challenge in this globalized market

In 1937, the imagination to become the "Largest pneumatic tool manufacturer in the East" is today a worldwide representative manufacturer for pneumatic tools.
Earnestly, since the founding of our company, the policy of quality first has always been our spirit for manufacturing and we continue to make strong efforts in this area. Always trying to understand the market needs and period, making continuous changes and improvements to our products have resulted in this position.

Also, from the context of manufacturing we have introduced the most advanced technology and equipment in order to move ahead with automation and to make our best efforts to balance the 3 elements of quality, price and supply.
All manufacturing facilities have obtained the international standard of quality control ISO 9000 series and in addition have obtained the Environmental standard of ISO14000 series.In addition, a learning center "Terakoya" was established within the main factory to develop and improve on technological developments. Making such continuous and tireless efforts to improve on the technical side.

In this age of continuous globalization of markets and products, Toku will continue to pass on the founded traditions of manufacturing by combining staff and technology to develop and rapidly progress into the upcoming future.
We appreciate the continued support and patronage for Toku by our customers for the upcoming future.
