

Headspring inc.

Company Description

Make society possible where everyone on Earth can benefit from electricity

Fifteen years since the turn of the twenty-first century, technological, industrial, and cultural exchanges across borders have become increasingly more active because of the rapid advances in globalization. Meanwhile, the world population has grown: thirty years ago, the population was less than five billion but is now over seven billion; estimates are that the world population will close to ten billion by 2050. Population growth in emerging countries brings concerns about the resources of food and energy, the environment, and economic disparity, which are now international issues. In order to address these issues, a large number of businesses, associations, and academic institutions will need to coordinate their activities and cooperate from a fundamental and long-term perspective. Headspring works to create a sustainable recycling-oriented society through the development, introduction; furthermore, the company wants to expand smart energy technologies to make a society possible where everyone on Earth can benefit from electricity by providing energy solutions of local production for local consumption in emerging countries.
