

株式会社クボタ建設

Kubota Construction Co.,Ltd.

Company Description

For Earth, For Life Kubota

Since its foundation in 1955, Kubota Construction has consistently contributed to the supply and recycling of safe water through construction of water infrastructure in Japan and abroad.

Water supply and sewerage business in Japan is in the phase of system reconstruction and its optimum management while facing the challenges of aging engineers, labor shortage and declining water revenue due to depopulation. In the global market there still exists people without access to safe water, waiting for the improvement of water and sewerage facilities.

In response to the rapid change of social needs and environment, Kubota Construction is determined to develop and provide innovative solutions in the water infrastructure through strong relationships of trust with our customers and partners in Japan and abroad.

Our asset is our employees. We are promoting to develop an environment that values employees and enables all human resources in our company to demonstrate their abilities and achieve self-fulfillment through work.
