

Flow International Corporation.

Company Description

From invention to perfection, we are the world leader in waterjet.

Flow's roots date back to the early 1970s, when former research and development scientists from Boeing founded Flow Research. The first technology commercialized by Flow Research was the use of an UHP waterjet as an industrial cutting tool. Soon after, we invented, patented, and perfected the world's first abrasive waterjet system. Since 1974, Flow has delivered over 15,000 waterjet and abrasive waterjet systems to customers in more than 100 countries.

Headquartered in Kent, Washington, Flow employs approximately 700 employees with offices in North and South America, Asia, and Europe. Globally we focus on technology leadership, a full continuum of products that provide complete manufacturing solutions, application expertise, unmatched service with a commitment to customer success across the world.
