M&A Research Institute Inc.

Company Description

We enable M&A according to your desired result.

We narrowed it down to about 500 - 1000 potential buyers from our database
and carefully select dozens of potential buyers to approach by utilizing AI matching algorithms.

We make it possible to transfer and sell at a transfer price that is more satisfying,
and also enable M&A and business succession to companies with high business synergies and less impact on employees and business partners.

In addition, we will help you create materials and business plans, and provide interview guidance in order to sell your company more attractively.

Speed to M&A closing

We lead M&A deals with great speed.
Using our unique AI matching system and experienced Advisers, we are leading speedy M&A deals in an average of 7.4 months (and as little as 43 days).
(In other companies, it may take an average of more than a year from the time of request to the conclusion of a contract.)

We search for potential buyers broadly and intensively over a short period of time, sometimes finding potential buyers on the same day at the shortest.

Our experienced M&A Advisers will fully support you

In the case of a normal M&A company, there are times when there is no person
in charge with extensive M&A experience, accounting knowledge, and legal knowledge.
There are many cases where the transfer is not the desired price, and furthermore, the business and employees,
after the transfer, are not considered. Cases like these place too much priority on closing deals.

Our team members are not only those who have a lot of experience at the M&A Comprehensive Research Institute.
There are many members who have transferred from famous M&A intermediary companies all over Japan.
We have grown into an M&A intermediary company that boasts top-class quality in Japan.

Our experienced M&A Advisers will support M&A for SMEs in various industries.
The sales scale of the transferor company is about 100 million yen to about 10 billion yen. We offer a wide range of services.
