

BTL Japan K.K.

Company Description

Corporate Philosophy

Through medical devices, we aim to enhance the quality of life for people worldwide.

In the ever-evolving environment, we strive to understand the needs of patients and continue to develop medical technology that aligns with modern standards.

With precise therapeutic effects and technology that prioritizes safety and reliability, we contribute to the health of individuals.

We aspire to achieve a sustainable society by improving regional culture and addressing global environmental issues.

Business Overview

From the development of medical devices to academic offerings and maintenance, we prioritize the well-being of patients. We collaborate with healthcare institutions to provide safe medical technology.

Product Development

With development hubs in Europe and Asia, encompassing a total of three countries, our team of over 400 research and development engineers research new technologies daily. We consistently develop products in response to market demand.

Product Provision

Through our global network, BTL Japan engages in cutting-edge medical device sales, academic support related to medical technology, and information provision.

Technical Support

To ensure the safe use of our introduced medical devices, we conduct after-sales and maintenance support. Our engineers, equipped with specialized knowledge and skills, visit locations for regular inspections and address unforeseen repairs. Moreover, we provide post-warranty maintenance services tailored to the needs of healthcare settings, promoting even safer device usage.
