マッスル株式会社

MUSCLE CORPORATION

Company Description

New possibilities for the world
by a servo system with a intelligence.

Since the founding of the company, we have been developing and selling "Servo Systems with Brains", through this system we are able to realize our goal of making our systems 1/2 the price, double the performance, and even more compact than existing systems.
The “Haute couture” technology for motion control that “Muscle” offers has played an active role in all kinds of scenes, such as industrial equipment, medical equipment, precision measuring equipment, industrial embroidery sewing machines, etc. It is also used in amusement park characters due to the advantage of its compactness and user-friendliness. Sometimes it is used as a guidance robot at train stations and sometimes handles the mechanism designs and movements of artwork.
We are expanding the possibilities of manufacturing a way to help people’s everyday lives for the well-being of future societies.

Company Details

Head Office
Japan

Main Business
FA機器・ロボット・医療用機器等の制御システム

Established
1988 (昭和63) 年5月26日

Capital
1110万円
