東亜ディーケーケー株式会社

DKK-TOA CORP.

Company Description

Since our establishment in 1944, we have contributed to the global environment and society as a manufacturer of analytical instruments. Our focus is on environmental protection (water, air and gas) and the medical-related field. We will actively expand our business based on these core fields.

Seeking growth in new markets and new fields

In the environmental field, we will focus on making original products that only DKK-TOA can develop, by refining our core technology in order to maintain and expand market share. As awareness of the importance of environmental protection is increasing worldwide, we expect demand for our technology to grow accordingly. This is especially true in the Asian market, where economic and population growth is anticipated. Until now, we have relied on an extended distribution network in overseas countries and formed alliances with local companies. We will accelerate development of products in line with the legal regulations and needs of particular countries, and focus on expanding our overseas business.

At the same time, we have newly established our medical-related devices as another core of the business. As populations around the world grow older, the market for medical-related devices is also expected to grow rapidly. Since first applying our sensor technology for water quality analysis to the development of dialysis treatment equipment in 1988, we have delivered a range of outstanding products. In order to grow our business further, we opened a new factory for medical-related devices in October 2017, to expand production of dialysis solvent dissolving equipment and promote development of new products.

Our four strategies to achieve growth

"Development Strategy" to accelerate development of new products
"Sales Strategy" to provide solutions fo both mature and growing markets
"Human Resource Development" to cultivate employees who can play an active role in the international field
"Production Reform" to increase the productivity and enhance the quality
By moving steadily forward with these strategies, we want DKK-TOA to become a highly competitive brand in the global market. We aim to gain trust from the international clients and societies and continue contibuting to the protection of global environment and realization of healthy life style.

Company Details
