

Japan Manned Space Systems Corporation

Company Description

Space and the Earth connected by technology

Japan Manned Space Systems Corporation (JAMSS), founded in 1990, has gained extensive manned space technology experience that prioritize safety as a leading company in the operation and utilization of the Japanese Experiment Module "Kibo" at the International Space Station.

As we enter the era where utilization of space is constantly increasing, JAMSS provides its unique technologies and knowledge to diverse fields and continues to explore the frontline of the space utilization business.
