

GMS Inc.

Company Description

We started GMS with the aim of increasing people's happiness in society.
We believe we can leverage our experience in Japan to make a positive contribution to the world.

From Vehicles in Society To Vehicles for Society
Just owning vehicles cannot make people happy.
Being aware of the importance of using vehicles, we would like to change the relationship between people and vehicles for the betterment of society.

Our Contribution to the world
We think that GMS can contribute to the global market by integrating state-of-the-art Japanese technology with our products and services.

Based on 16 years of experience in the electric vehicle industry, we have invented a sensing and controlling device for vehicles and are working to provide value to the society through our innovative Mobility Service Platform (MSPF).

We believe that this approach, which presents a paradigm shift in global mobility finance, will be a sustainable service model in countries seeking low-carbon vehicles. We are confident that this business model will gain traction and become established in the world.

We, together with our local partners, will launch our service in countries and regions that are in need.

We promise to provide real value to the people who need us and to increase the quality of life of the people using our service.

To be a company that can continually impress others, we plan to make a big contribution on the world stage.
