

LiNKX Inc.

Company Description

We are an engineering-first startup focused on modernizing mission-critical systems. With over 80% of our team comprised of talented local and international software engineers, we tackle complex challenges such as building next-generation core banking systems and payment platforms.

Since our founding in 2020, we have focused on three core pillars: FinTech, Lab Automation, and Social Tech, aimed at contributing to society. Each of these areas has experienced rapid growth.

In addition to our in-house products like 'Lab Hub' and 'shikAI', we are committed to using cloud-native technologies to solve challenges not only in FinTech but also beyond. Looking ahead, we plan to expand our expertise into other sectors such as HealthTech and GovTech, applying the knowledge we've gained to create impactful solutions for the future.

1. FinTech Solution

- Core banking system development support
- FinTech service development support (app development, API solutions, etc.)
- In-house system development support and consulting

2. PharmaTech Solution

- Lab Hub
