

Alphast Inc.

Company Description

CHENGSI Japan Co., Ltd., was established in 2016 with the mission of "Increasing Workplace productivity around the world with IT".

Japan's productivity is currently ranked at the bottom even among developed countries. I have lived abroad for 13 years, in China and Thailand, I have witnessed both of nations grew up very fast during my stay. I kept asking myself how I could create working environment with the same kind of enthusiasm and speed in Japan to enhance productivity and efficiency of workplace. That is how I reached the conclusion to establish CHENGSI Japan.

The core of our business is providing implementation consulting for IFS Applications package, system development, post-implementation operation and maintenance services for global manufacturing customers who have their headquarters in Japan.

We also set "work together, more productivity together" as a common goal with customers throughout projects. Particularly we believe that our strength is our knowledge of production operations.

We have established a subsidiary in North American in 2021.

We have 160 consultants and engineers with business knowledge around the world so that we can support oversea roll-out smoothly with the subsidiaries that we collaborate with. In addition,

We can offer seamless introduction support from overseas to Japan as we have actively hired employees from different regions and countries at each subsidiary to build a diversity-focused organization. Through these initiatives, we will devote ourselves to contribute improving workplace productivity for our customers and whole society.
