

Y-tec Co.,Ltd.

Company Description

I am happy to announce that Y-tec has lived through more than half a century since its foundation. The last half century for this company has truly been a time of many challenges and innovations.

I am deeply grateful to the guidance and support we have received from so many people over these long years.

During this era of the rapid progress and globalization of the automobile industry, since its foundation, our company has striven to establish an integrated manufacturing system that encompasses developing, manufacturing, and recycling of automobiles, hoping that we become a better partner to the customers. The strength of Y-tec is our untiring desire to boldly take on challenges to prefetch advanced technologies that meet the needs in the future.

Technologies are fruits of people and their intense efforts. Our company regards "manufacturing" as "development of human resources", and on this principle, we always make much effort in fostering talents of our employees. One important management philosophy is "a sense of solidarity." Based on this spirit, we combine the wisdom of all members of our company, which, I think, leads to earning customer confidence and trust. For this purpose, we cannot afford even a single person to become a hindrance.

For the next 10 years and 20 years, we will keep making steady steps into the future to open new chapters in our history. Your understanding and support for many years to come would be appreciated.
