PULS GmbH

Company Description

PULS – Innovative, reliable, and first-class: Your partner for industrial power supply solutions.

“When I founded PULS over 40 years ago, we were a handful of developers with a common goal: to push the boundaries of industrial power supply technology. Since then, we have been doing that day in and day out.”
Bernhard Erdl
CEO, founder, chief developer

Company
As a global leader in DIN rail power supplies and supplementary devices, PULS has been setting new standards in industrial power supply for over 40 years. As an innovation driver for decentralised Field Power Supplies and a pioneer in inductive charging systems, we are also committed to technologies beyond the control cabinet, providing our customers with outstanding solutions.

Products
PULS products are founded on the expertise and pioneering spirit of more than 100 development engineers. Our DC-power solutions are the result of talented and creative engineering. We always think one step ahead and are ready and willing to go that extra mile.

Trust
The quality of our power supplies is at the core of everything we do at PULS. Our purchasing and development departments ensure the use of only the highest-quality components during the design process. In MTBF and lifetime, we regularly set market benchmarks.

The entire supply chain management is controlled by PULS’ internal processes. Starting with the design and development, on to the purchasing of components through to the manufacturing in our own plants, everything is controlled by the company’s work processes. This enables us to guarantee the highest standards and absolute reliability. Our two production sites in Europe and Asia also ensure dependable, long-term product availability.

Thanks to the long-term availability and stability of our product portfolio, our customers can plan without worrying about obsolescence or sudden design changes. We guarantee that our power supplies will still be available even when successor models are on the market, giving you the flexibility to decide when to upgrade to our latest technologies.
