

Yokohama Solar Solutions

Company Description

We at Yokohama Solar Solutions are part of the green energy revolution and combine the right mix of engineering, design and high-quality materials with outstanding service to fulfill our customers' needs.

We will provide our customers with mounting system solutions for any solar project through the experience and technology that is built on a track record of solar power generation of more than 2 GW across Japan. Through this mission, we aim to be the company that delivers high-quality products for long-term success.

The experienced team at Yokohama Solar Solutions consists of solar industry professionals with a proven track record of mounting system engineering both in Japan and across Asia. The team is committed to deliver on our three core values – Support. Quality. Engineering – which play a crucial part in the development of an optimal structure to protect PV modules against wind, snow, and other forces of nature.

Having built up this experience, we tailor-made the right solution to every project and base the engineering design not only on the national standards but also to our own. As the climate is changing over the past decades, we must include safety to ensure the longevity of our products for +25 years.
