KAGLA VAPORTECH CORPORATION was established in 1958 as a small manufacturer of LPG manual pumps. Since then, our unremitting efforts have made us widely recognized as a leading manufacturer of LPG / Ammonia vaporizers and other related LPG devices. History of more than 60 years has earned us a reputation of being one of the most experienced LPG vaporizer manufacturer in the world. Through continuous research and development over the years, "KAGLA" brand has grown to be a symbol of durability, reliability and safety.

While environment issues have become a common global concern, rapid increase of energy demand among developing countries and sense of distrust to nuclear power plants have made the situation further complicated. In this energy diversified era, we foresee the role of LPG as a major source of clean energy. And therefore, we wish to contribute to its further growth.
