

HIRAMIYA co.,Ltd

Company Description

For over half a century, Hiramiya Co., Ltd. has built a solid track record in the field of metal processing since its founding as Hiramiya Manufacturing in 1970. Headquartered in Kawasaki City, Kanagawa Prefecture, the company is engaged in a wide range of businesses, including the manufacturing of custom-made store fixtures and decorative hardware for commercial facilities, as well as parts for automobiles and special-purpose vehicles.

The company's greatest strength lies in its advanced fusion of "analog technology," represented by the sheet metal and metalworking skills of its craftsmen cultivated over many years, and "digital technology," which includes 3D scanners, 3D CAD, and laser cutting machines. This combination of technologies enables the company to transform a client's vague images or concepts into tangible forms. For example, Hiramiya has earned a high reputation for its flexible and high-precision manufacturing, which includes the ability to create products even from hand-drawn sketches.

Hiramiya's business domain is extensive, ranging from the manufacturing and installation of metal products for the interiors of apparel stores, restaurants, and public facilities, to the supply of parts to the automotive industry. In recent years, the company has also taken on challenges in cutting-edge technology fields, such as the production of mockups for the internal components of quantum computers. This demonstrates that Hiramiya's technological capabilities and development prowess are trusted by a diverse range of industries.

Hiramiya is more than just a manufacturing company; it is a partner that "gives shape to the thoughts" of its clients. The company participates in projects from the planning and design stages and provides one-stop services that cover measurement, mechanism analysis, surface treatment, and final installation.
