

Jmees Inc.

Company Description

Aiming for "a world
where anyone can receive safe and secure surgery"

Jmees was founded from a meeting between an AI engineer and a surgeon.

They are Hiroki Matsuzaki, an AI engineer who wanted to change the future of medicine with deep learning and image recognition technology, and Masaaki Ito and Nobuyoshi Takeshita, surgeons who wanted to change the future of surgery with innovations at the National Cancer Research Center Hospital East.

While dreaming of "surgical automation" in the distant future, we continue to develop solutions that will make surgeries more uniform, more efficient, and safer, with the aim of creating a world where anyone can undergo safe and secure surgery.

Company Details

Head Office

Japan

Main Business

AIによる外科手術支援システムの開発

President

松崎 博貴

Established

2019年10月
