Company Description

Harnessing the Power of Technology Towards a World of Safety and Security

Redefining the way we understand human behavior through cutting-edge behavior-recognition AI, Asilla—established by visionary founders from Japan and Vietnam—has become a global leader in this domain. Our robust R&D and proven field performance distinguish us in the industry. Its exceptional R&D capabilities and remarkable real-world performance have captivated not only engineers but the entire industry, setting it apart as a leading technology industry.

OUR MISSION

To turn every space into valuable,

1. Enhancing the Value of Physical Spaces

We leverage AI to interpret and anticipate human behavior captured by cameras. By doing so, we unlock the latent potential of physical environments—making them smarter, more responsive, and more valuable.

2. Creating More Inclusive and Accessible Spaces

We aim to improve the convenience and experience of individuals who require assistance, contributing to the development of environments that are safe, supportive, and inclusive for all.

At the core of these initiatives is our proprietary behavior recognition AI—a versatile and scalable technology with the potential to solve complex challenges across industries. From detecting abnormal or high-risk behaviors to analyzing customer flow and identifying suspicious activities, our AI-powered security solution, Asilla, integrates a patented discomfort detection algorithm to deliver exceptional performance. This has led to its widespread adoption across a growing number of enterprise clients. With a dedicated team of over 100 professionals, we remain committed to advancing our technology and realizing our vision of a safer, smarter, and more inclusive world.

TECHNOLOGY DRIVEN FUTURE

Co-founded by a visionary partnership between Japanese and Vietnamese, Asilla Inc. is a start-up company that aims to create a safe and secure world with the power of technology based on behavior recognition AI.

With a mission to make Asilla's technology a social infrastructure that enhances all kinds of spatial value, we will scale up to businesses that enhance "spatial value" and achieve "democratization of AI" in the near future.

Company Details

Head Office

Japan

Main Business

行動認識AIを軸にした技術の力で、安全で快適な世界を目指すスタートアップカンパニー

President
