KATAHIRA & ENGINEERS INTERNATIONAL
株式会社 片平エンジニアリング・インターナショナル

Katahira Engineering International Co., Ltd.

Company Description

Katahira & Engineers International (KEI), established on May 1, 1987, is a premier Japanese technical consulting firm exclusively dedicated to providing expertise in international development assistance, primarily focusing on civil engineering and construction projects in developing countries. Operating from its headquarters in Chuo-ku, Tokyo, under the leadership of President Tomoaki Nakamura, the firm maintains a capital of 50 million yen and a team of 120 employees.

The company's mission is deeply rooted in the philosophy of "commitment to the growth and development of developing countries." Utilizing advanced technologies and accumulated experience, KEI has successfully participated in over 800 Official Development Assistance (ODA) projects in more than 60 countries across the globe, earning a high degree of trust from both donor organizations like JICA and the governments of partner nations.

KEI specializes in providing comprehensive consulting services for overseas civil engineering and construction. While they are recognized experts in the transportation infrastructure sector, particularly roads and bridges, their service scope is broad and covers the entire project lifecycle. This engagement spans from the initial stages of project formulation and preparatory surveys to the establishment of traffic and transport policies, detailed planning, design, and rigorous construction supervision for major infrastructure works.

Crucially, KEI's commitment extends beyond the physical infrastructure, encompassing the vital "soft" components of development. They provide consulting in critical areas such as environmental and social considerations, environmental protection measures, human resource development for infrastructure operation and maintenance, and regional development. By maintaining a network of overseas offices in locations including the Philippines, Vietnam, Sri Lanka, Cambodia, East Timor, and Kenya, KEI ensures that its solutions are finely tuned to local needs and conditions.

In recent years, KEI has strategically expanded its focus to tackle complex, contemporary global challenges. Beyond its core infrastructure mandate, the firm is actively engaged in new fields such as private sector development, urban planning, disaster prevention, ICT, resource and energy development, climate change countermeasures, poverty reduction, and peacebuilding. This diversified approach reflects the firm's ambition to expand its client base beyond traditional ODA projects to include international organizations, local governments, and private enterprises.

The company adheres to a corporate motto emphasizing integrity and robustness ("Shitsujitsugouken"). KEI is committed to maintaining high technical standards, employing numerous qualified professionals (such as Professional Engineers/P.E. equivalent), and actively fostering the growth of younger talent who possess a strong desire to contribute to international cooperation. The firm offers a challenging and rewarding career path for engineers dedicated to making a positive impact on global development.
