EAGLYS Co., Ltd.

Company Description

EAGLYS Corporation: Realizing the Update of Society through "Collective Intelligence" with Secret Computing and AI

EAGLYS Corporation is a leading technology company dedicated to the ambitious mission of "securely utilizing all data and transforming it into value." Established in December 2016, with roots in technological seeds from the University of Tokyo, the company specializes in combining cutting-edge data security technology with advanced AI capabilities to solve some of the most critical data challenges facing modern industries.

The core technology driving EAGLYS's social implementation is **Secure Computing, particularly Secret Computing (or Secure Multi-Party Computation)**. Secret Computing is a revolutionary technology that allows computation to be performed directly on encrypted data. This mechanism ensures that highly sensitive information and private data—which would otherwise be off-limits due to regulatory or security concerns—can be safely linked, analyzed, and jointly utilized across different companies and organizations. By removing data silos, EAGLYS enables cross-industry data collaboration previously deemed impossible.

EAGLYS integrates this Secret Computing capability with its accumulated expertise in AI algorithm design and analysis, offering it through its flagship product, the **Private AI Platform, "DataArmor®."** This platform facilitates transformative digital transformation (DX) across various sectors, including financial fraud detection, yield improvement in manufacturing, genomic data analysis in healthcare, and collaborative analysis of confidential customer data in marketing.

The strength of EAGLYS lies not only in its technology but also in its ability to provide end-to-end support to clients. This includes optimal solution design, implementation, and operation, all tailored to address specific industry challenges by leveraging the synergy of Secret Computing and AI. The company is focused on accelerating the utilization of sensitive industrial data, fulfilling its vision to "become a hub connecting dormant data in the world and updating society through collective intelligence."

EAGLYS has prioritized diversity and inclusion since its founding. Its environment is highly international, with approximately 40% of its workforce comprising specialists from various countries. English serves as the official internal language, fostering a dynamic space where individuals of different nationalities, cultures, and expertise contribute their unique knowledge, experience, and insights to drive innovation. The company supports a flexible work system and a professional development framework designed to advance individual career aspirations, ensuring that highly skilled professionals can thrive while maintaining a balanced work and life. EAGLYS offers a challenging and rewarding field for individuals passionate about implementing advanced technology to maximize data value and create a better future.

Company Details

Head Office
Japan

Main Business
秘密計算を中心としたセキュアコンピューティング技術によるデータセキュリティ/データ利活用サービスの提供。AIアルゴリズム設計・解析技術によるAI開発/解析サービスの提供。Private AIプラットフォーム「DataArmor®」の開発・提供。

President
今林 広樹

Established
2016年12月

Capital
1億円（※調達資金等を含むと約10億円超）

Number of Employees
11 - 50
