Steelwrist Japan K.K.

Company Description

【Redefining Construction Efficiency: The Steelwrist Story】 Steelwrist is a leading global manufacturer of tiltrotators, quick couplers, and work tools for excavators. Headquartered in Rosersberg, Sweden, the company has established itself as one of the fastest-growing technology leaders in the construction equipment industry since its founding in 2005. The company's core philosophy is centered on the goal of creating "Earth's most efficient excavator," a vision that drives every product development and strategic decision.

【Core Technology: Tiltrotators and the SQ System】 At the heart of Steelwrist's offering is the tiltrotator, a sophisticated attachment that acts as the "wrist" of the excavator. This technology allows the operator to tilt and rotate the bucket or any other work tool in any direction, significantly reducing the need for machine repositioning. The result is a dramatic increase in productivity—often by more than 30%—and a substantial reduction in fuel consumption and CO2 emissions. Furthermore, Steelwrist's SQ (Steelwrist Quick) technology represents the pinnacle of automatic hydraulic couplers. It enables operators to change between various hydraulic work tools, such as breakers, shears, and tiltrotators, in seconds without leaving the safety of the cabin. This focus on "Safety first" is not just a slogan but a built-in feature of their patented Front Pin Lock technology, which ensures that tools are always securely attached.

【Leading the Open-S Standard】 Steelwrist is a co-founder and a driving force behind the Open-S standard. This global, open standard for fully automatic quick couplers allows contractors and operators to combine couplers, tiltrotators, and work tools from different manufacturers who comply with the same standard. By promoting interoperability, Steelwrist empowers customers with the freedom to choose the best tools for their specific needs, fostering innovation and competition across the entire industry. This transparent and customer-centric approach has solidified Steelwrist's reputation as a progressive industry leader.

【Strategic Expansion into Japan】 Recognizing the unique needs and high standards of the Japanese construction market, Steelwrist established Steelwrist Japan KK in 2022. Based in Roppongi, Tokyo, the Japanese subsidiary provides direct sales, technical support, and spare parts services to local customers. Japan's construction sector faces significant challenges, including a shrinking workforce and the need for digital transformation (i-Construction). Steelwrist's solutions are perfectly positioned to address these issues by automating complex tasks and improving site safety. As Steelwrist continues to grow globally, its commitment remains the same: to deliver high-performance products that make the lives of excavator operators easier, the businesses of machine owners more profitable, and the future of construction more sustainable.

Company Details

Head Office
Sweden

Main Business
建設機械（ショベルカー等）用アタッチメントの開発・製造・販売（チルトローテータ、クイックカプラ、油圧ワークツール、制御システム等）

President
グローバルCEO：Stefan Stockhaus（ステファン・ストックハウス）日本代表/カントリーマネージャー：五十嵐 卓次郎

Established
2005年（スウェーデン本社）※日本法人は2022年設立

Capital
非公開（スウェーデン Terratech AB傘下）

Number of Employees
101 - 500

Offices

Main Office
Kitanagai 318 - 1, Iruma-gun Myoshi-machi
Saitama, Japan, 3540044
