## Biesse Japan K.K.

---

### Company Description

Founded in 1969 in Pesaro, Italy, Biesse is a global leader in the design and manufacture of advanced machinery and systems for processing wood, glass, stone, plastics, and composite materials. Since its inception, the company has consistently remained at the forefront of technological innovation, evolving into a world-class technology group listed on the Italian Stock Exchange (Euronext STAR Milan).

What sets Biesse apart is its identity as more than just a machinery manufacturer. The company provides integrated production lines and smart factory solutions powered by IIoT (Industrial Internet of Things) for diverse industries, including furniture, housing, construction, automotive, and aerospace. A prime example is "SOPHIA," their proprietary digital platform that enables real-time monitoring and predictive maintenance, simplifying complex manufacturing processes and significantly boosting productivity for clients worldwide.

Under its strategic "One Company" vision, Biesse operates a vast global network with four major manufacturing campuses and over 30 showrooms across the globe. With approximately 80% of its revenue generated in international markets, the group supports customers in more than 160 countries. Its workforce of approximately 4,400 employees is united by a common mission: to empower the potential of any material through technical excellence and human ingenuity.

Sustainability is also central to Biesse's corporate DNA. The company is deeply committed to ESG (Environmental, Social, and Governance) principles, focusing on energy-efficient machine design, social responsibility, and fostering a diverse and inclusive workplace. By bridging the gap between traditional craftsmanship and cutting-edge automation, Biesse continues to redefine the future of manufacturing, offering innovative solutions that respect both the environment and the people who use them.

### Company Details

---

**Head Office**

Italy

---
