

Adler Ortho K.K.

Company Description

Adler Ortho Japan Ltd. is the Japanese subsidiary of **Adler Ortho SpA**, headquartered in Milan, Italy. Established in 2004, the parent company was founded by the **Cremascoli family**, who bring over 50 years of extensive experience to the field of orthopedics.

The company is a global pioneer, being the first to introduce **3D printing (Electron Beam Melting)** technology to implant manufacturing. This advanced technology enables the creation of complex porous structures that were previously impossible to achieve with traditional methods, resulting in high-quality prosthetic joints with superior biocompatibility.

In Japan, the company is rapidly expanding its presence and has earned significant trust from orthopedic surgeons. This success is driven by its innovative technical capabilities and its ability to provide **custom-made solutions** tailored to specific clinical cases.
