

## Graphisoft Japan Co.,Ltd.

### Company Description

Graphisoft Japan Co., Ltd. is a leading provider of Building Information Modeling (BIM) software solutions, serving as the strategic Japanese subsidiary of Graphisoft SE. Founded in 1982 in Budapest, Hungary, Graphisoft made history in 1984 by launching Archicad, the world's first BIM software available on personal computers. This innovation fundamentally changed the architectural profession, moving beyond simple 2D drafting into the world of intelligent 3D modeling. Today, as a key brand within the Nemetschek Group—a global powerhouse in AEC (Architecture, Engineering, and Construction) software—Graphisoft continues to empower architects and designers to create world-class architecture.

The core identity of Graphisoft is defined by its mission: to empower teams to design and deliver great buildings through award-winning software solutions, learning programs, and professional services. Unlike generic CAD platforms, Archicad was developed with a deep understanding of the architectural workflow. Its "Virtual Building" concept allows users to create a digital twin of a structure, integrating physical geometry with vital data such as materials, costs, and structural properties. This data-driven approach ensures that as the design evolves, all associated documentation—plans, sections, elevations, and schedules—updates automatically, drastically reducing errors and increasing efficiency.

Graphisoft Japan was established in 1996 to bring these cutting-edge technologies to the Japanese market. Over the past three decades, the company has worked closely with Japan's leading architectural firms and general contractors, customizing its solutions to meet the rigorous standards of the Japanese construction industry. The "Japan-specific" localization of Archicad is renowned for its depth, incorporating local building codes, traditional Japanese architectural elements, and specialized construction workflows.

In addition to Archicad, Graphisoft Japan offers a robust ecosystem of collaboration tools. BIMcloud, the industry's first real-time BIM collaboration environment, allows architects and engineers to work together on a single project regardless of their physical location or the size of the building model. This has become an essential infrastructure for modern firms seeking to implement flexible work-from-home policies or manage complex international projects. Furthermore, BIMx—an innovative mobile presentation and coordination app—bridges the gap between the design studio and the construction site. It allows stakeholders to explore 3D models and access 2D drawings on tablets or smartphones, ensuring that everyone involved in a project has the most up-to-date information at their fingertips.

A key pillar of Graphisoft's strategy is "Open BIM." The company believes that no single software vendor can solve every challenge in the construction lifecycle. Therefore, Graphisoft champions an open, collaborative approach that allows users to exchange data seamlessly with other specialists using different software, such as structural or MEP (Mechanical, Electrical, and Plumbing) engineers. This philosophy promotes transparency, reduces data loss, and fosters a more sustainable and efficient building process.

For those considering a career at Graphisoft Japan, the company offers a unique blend of a global corporate culture and a specialized, high-impact local team. Employees are part of a multinational network that values innovation, creativity, and customer success. The Japanese office is known for its professional yet agile environment, where expertise in both technology and architecture is highly valued. As the Japanese construction industry undergoes a massive digital transformation, Graphisoft Japan stands at the forefront, providing the essential tools and knowledge to build the future of our urban environments. With a strong commitment to education through "Graphisoft Learn" and a dedicated support team, the company ensures that its users—and its employees—are always equipped with the skills needed to excel in an increasingly digital world.

### Company Details

#### Head Office

Japan

#### Main Business

建築・建設業界向けBIM（ビルディング・インフォメーション・モデリング）ソフトウェアの開発・販売・サポート。主な製品に「Archicad」「BIMcloud」「BIMx」など。

#### President

トロム・ペーテル（Péter Trom）

#### Established

1996年6月（日本法人設立）

#### Capital

2億6,500万円

---

**Number of Employees**

11 - 50

---

**URL**
