新英ホールディングス株式会社

SHINEI HOLDINGS.Co.,Ltd.

Company Description

Shin-Ei Metal Co., Ltd. is a distinguished specialist in metal recycling, having maintained a steadfast commitment to the industry since its establishment on September 24, 1953. Headquartered in Anjo City, Aichi Prefecture, the company has played a pivotal role in supporting Japan's economic development and resource security for over 70 years. In a nation with limited natural resources, Shin-Ei Metal's expertise in transforming metal scrap into valuable raw materials has become an essential pillar of the industrial supply chain.

The company's primary business activities revolve around the procurement, processing, and sale of ferrous and non-ferrous metal scrap. Operating through an extensive network of strategic locations—including offices in Tokyo and 11 specialized processing plants across Aichi, Gifu, and Mie prefectures—Shin-Ei Metal utilizes advanced technology to handle complex recycling tasks. Their facilities are equipped for high-efficiency shearing, baling, and shredding, ensuring that materials are processed into high-quality recycled products for steel mills and foundries. Furthermore, the company is a licensed provider of industrial waste management services, strictly adhering to the End-of-Life Vehicle (ELV) Recycling Law and various environmental regulations to ensure safe and sustainable waste disposal.

What sets Shin-Ei Metal apart is its position as the flagship enterprise of the Shin-Ei Group. Under the umbrella of Shin-Ei Holdings, the company collaborates with sister organizations such as Shin-Ei Unyu (logistics) and other specialized units to offer comprehensive, one-stop environmental solutions. This synergy allows them to manage the entire lifecycle of industrial by-products, from collection and transportation to final processing. Recognizing the global nature of the resource market, the company has also expanded its footprint internationally, establishing subsidiaries and joint ventures in Thailand and South Korea. This global network enables Shin-Ei Metal to facilitate the international trade of recycled materials and contribute to a worldwide circular economy.

The corporate philosophy of Shin-Ei Metal focuses on "contributing to society through eco-friendly recycling activities and striving for the happiness of employees." This mission aligns perfectly with modern Sustainable Development Goals (SDGs). By recycling metals—a process that requires significantly less energy than producing metal from ore—the company actively contributes to the reduction of CO2 emissions and the preservation of natural landscapes.

Regarding its workplace culture, Shin-Ei Metal values the well-being of its 232 employees. The company provides a robust benefits package, including access to exclusive resort facilities and organized social events through the "Shin-Ei Kai" association, fostering a sense of community and stability. With a turnover exceeding 43 billion yen (as of March 2024), the company combines the reliability of a long-established business with the innovative spirit required to lead the green transition. Shin-Ei Metal remains dedicated to its role as a guardian of the environment, continuously seeking more efficient ways to recycle and ensuring a sustainable future for the next generation.
