Mitsui Bussan Chemicals Co., Ltd.

# MITSUI BUSSAN CHEMICALS CO.,LTD.

## Company Description

Mitsui Bussan Chemicals Co., Ltd. is a specialized trading company that plays a pivotal role in the chemical business sector as a wholly owned subsidiary of Mitsui & Co., Ltd., one of the world's leading sogo shosha. Established in March 1991, the company has spent over three decades evolving into a key player in the chemical industry, leveraging its expertise to manage both domestic distribution and international trade operations. Its business foundation is built on a wide range of essential products, including solvents, coating resins, adhesives, and pigments, which serve as critical raw materials for industries such as automotive, electronics, construction, and packaging.

The company’s competitive edge lies in the synergy between Mitsui & Co.’s vast global logistics network and its own deep, specialized knowledge of chemical products. Unlike traditional trading firms that focus solely on buying and selling, Mitsui Bussan Chemicals provides comprehensive value-added services. These include technical consulting, quality control management, and the coordination of contract manufacturing, ensuring that they meet the complex and evolving needs of their global clientele. This multifaceted approach allows the company to act as a vital bridge between material suppliers and end-product manufacturers.

With a workforce of approximately 280 employees, the organization operates on a principle of "select few, high efficiency." This structure fosters an environment where individual professionals are given significant responsibility and autonomy from an early stage in their careers. The corporate culture is defined by an open-minded and vigorous atmosphere—a hallmark of the Mitsui Group—where employees are encouraged to challenge the status quo and pursue innovative business models in a rapidly changing global market.

Furthermore, Mitsui Bussan Chemicals is deeply committed to sustainability and environmental stewardship. Recognizing the chemical industry's role in global climate goals, the company is actively expanding its portfolio of eco-friendly products and "green chemistry" solutions. By focusing on resource efficiency and the development of sustainable supply chains, they aim to contribute to a circular economy. Through its dedication to professional excellence and social responsibility, Mitsui Bussan Chemicals continues to strive toward its mission of enriching society through the power of chemistry, ensuring long-term growth and reliability for all stakeholders involved.
