

## Sapphire Stream Technology

---

### Company Description

The company specializes in **Artificial Intelligence (AI)**, **the Internet of Things (IoT)**, and **automotive software** as its core technologies, providing end-to-end services that encompass research and development, design, manufacturing, sales, maintenance, and testing of both software and hardware. Leveraging its expertise in edge AI solutions and embedded systems development, the company supports digital transformation (DX) across a wide range of industries, including automotive, smart devices, and industrial equipment.

Its business activities include the development, manufacturing, sales, maintenance, and testing of software and hardware for telecommunications and information processing equipment, as well as the manufacturing, sales, import, and export of electronic devices and related products. The company also develops, acquires, manages, and licenses intellectual property rights and proprietary technologies related to software. In recent years, it has focused on advanced mobility solutions, including automotive Over-the-Air (OTA) systems, AUTOSAR, and embedded software development.

As part of a global group headquartered in Singapore, the company operates across multiple countries and regions, including Japan, South Korea, India, Malaysia, Vietnam, and Germany. By leveraging its global development network, cutting-edge AI technologies, and software engineering expertise, the group is committed to delivering innovative solutions to customers worldwide.
