

Agatha Inc.

Company Description

Agatha Inc. is an innovative healthcare and life sciences IT startup founded in October 2015 with a profound mission: "To contribute to the healthy lives of people around the world." The company specializes in developing, providing, and supporting "Agatha," a state-of-the-art cloud-based document management platform tailored specifically for clinical trials, clinical research, and quality management system (QMS) workflows.

The development and manufacturing of pharmaceutical products and cutting-edge medical treatments require compliance with extremely strict regulatory standards. Historically, this compliance demanded an overwhelming volume of paperwork, physical signatures, and secure, long-term storage, which created significant operational bottlenecks for medical institutions and pharmaceutical companies alike. Agatha's solution digitizes and centralizes these complex processes on a secure cloud infrastructure, successfully accelerating digital transformation (DX) across the healthcare sector and drastically reducing the time and cost involved in drug development.

Under the leadership of Founder and CEO Chiemi Kamakura—who brings extensive expertise from her roles in government, IT project management, and global executive leadership in healthcare IT—Agatha has grown rapidly. Today, its platform is utilized by a wide array of leading medical institutions, universities, and pharmaceutical companies globally. Guided by its core values—Integrity & Transparency, Assume the Best of Everyone, Customer Success, Quality, and Speed—Agatha continues to expand its global footprint, aspiring to build a secure, world-class medical infrastructure that helps bring better treatments to patients faster than ever before.
