

TAYCA CORPORATION

Company Description

TAYCA CORPORATION, established in 1919 and headquartered in Osaka, Japan, is a leading chemical manufacturer with over a century of history. Listed on the Prime Market of the Tokyo Stock Exchange, the company is dedicated to the research, development, manufacturing, and sales of various industrial chemicals that contribute to societal development and enrich people's lives. TAYCA operates on the foundation of three core technologies: inorganic materials, organic materials, and analytical and evaluation technologies.

Since its founding, initially focusing on superphosphate fertilizers, TAYCA has significantly diversified its product portfolio. The production of titanium dioxide, which began in 1951, and surfactants, which started in 1961, have become the primary pillars of its business. In recent years, TAYCA has strategically shifted its focus towards high-value-added functional products. These include micro-particle titanium dioxide and zinc oxide for cosmetics, pollution-free anti-rust pigments that address environmental concerns, and titanium dioxide for photocatalysts. These advanced products have garnered high praise in the global market. Furthermore, TAYCA's exceptional technological capabilities and significant market share were recognized when it was selected as one of the "Global Niche Top Companies Selection 100" by Japan's Ministry of Economy, Trade and Industry.

TAYCA is also actively expanding its presence in the electronic materials sector. The company develops and manufactures conductive polymers used in capacitors for smartphones and personal computers, as well as piezoelectric materials utilized in medical ultrasound diagnostic imaging equipment. This demonstrates TAYCA's commitment to playing a vital role in cutting-edge technological fields.

To support its continuous innovation, TAYCA maintains strong research and development facilities across Japan, including operations in Osaka, Okayama, and Kumagaya. Recognizing the importance of a global presence, TAYCA has established manufacturing and sales bases for surfactants in Thailand and Vietnam to meet the growing demand in Asian markets. Additionally, the company is strengthening its overseas business foundation through piezoelectric material operations with its affiliated companies in the United States.

By pursuing environmentally conscious manufacturing, TAYCA strives to remain a company that is indispensable to the global community, taking on new challenges for future growth and sustainable development.
