

Rebound Electronics Co., Ltd

Company Description

Rebound Electronics Co., Ltd is the Japanese entity of a global electronic components sourcing and supply group originating in the United Kingdom. Since its establishment in 2003, the Rebound Group has leveraged its extensive global sourcing network and market intelligence to support the reliable supply of semiconductors and a wide range of electronic components.

Its principal business activities include global electronic component sourcing and distribution, Bill of Materials (BOM) analytics, urgent procurement of shortage components, obsolescence management, alternative component solutions, and excess inventory management and resale. The company also provides data-driven market insights and procurement support to help customers mitigate supply chain risks and optimize purchasing costs.

Rebound serves a diverse range of industries, including aerospace and defense, automotive, industrial equipment, medical, energy, and data centers. Through its global sourcing capabilities, quality assurance processes, and supply chain expertise, the company supports production continuity and efficient component procurement for customers worldwide.
