

Stellar Cyber Inc.

Company Description

Stellar Cyber is a cybersecurity company headquartered in San Jose, California. We believe organizations of every size should have enterprise-grade security operations. To make that possible, we build and deliver an AI-driven Autonomous SOC platform.

Our platform brings SIEM, NDR (Network Detection and Response), ITDR (Identity Threat Detection and Response), SOAR, UEBA and other security capabilities together in one platform. Because the architecture is open, it can collect and correlate data from tools customers already use, such as EDR, firewalls, cloud services and identity products. Agentic AI then automates threat detection, investigation and response. Analysts spend less time working through alert volume and more time on the threats that matter most.

More than 15,000 enterprises, MSSPs (Managed Security Service Providers) and MSPs in over 50 countries use Stellar Cyber. Customers rely on us to help with problems the whole industry faces, such as the shortage of security talent and the growing number of tools teams have to manage.

At Stellar Cyber, our mission is to protect organizations around the world from cyber threats using advanced AI and cybersecurity technology. If you want to join a global team and make a real impact in a fast-moving environment, we'd love to hear from you.
