

ENGEL Japan K.K.

Company Description

ENGEL Japan K.K., established in October 2019, serves as the wholly owned Japanese subsidiary of ENGEL Austria GmbH, a global pioneer and undisputed leader in the manufacturing of plastic injection moulding machines and integrated automation solutions. Since its inception in 1945, the ENGEL Group has remained an independent family-owned enterprise. Today, it has grown into a massive global network with multiple production plants and subsidiaries across the world. The company is renowned for developing high-performance injection moulding machines capable of processing thermoplastics, thermosets, and elastomers, alongside cutting-edge automated production cells that optimize the entire manufacturing workflow. Headquartered in Nihonbashi-Kabutocho, Tokyo, ENGEL Japan acts as the vital bridge connecting these world-class technologies with Japan's highly demanding and advanced manufacturing sector. We operate not merely as an equipment supplier, but as a comprehensive solutions provider dedicated to resolving complex production challenges. Our core operations encompass the sales of all ENGEL machinery, the delivery of highly specialized technical services, and the rapid, reliable supply of essential spare parts. One of our greatest strengths lies in combining unparalleled global expertise with a deeply localized support system tailored to the Japanese market. From our Tokyo base, our technical teams are fully equipped to travel nationwide, ensuring that our customers receive prompt, on-site assistance regardless of their facility's location within Japan. To further enhance our service quality, our team operates proficiently in three languages—Japanese, English, and German. This multilingual capability enables seamless and efficient communication with our headquarters in Austria and global engineering experts. Understanding that machine downtime directly impacts profitability, we provide an unwavering 24-hour support structure. While support outside of regular business hours may be handled in English or German, this round-the-clock availability guarantees that our customers can always access expert troubleshooting and technical guidance whenever emergencies arise. In today's rapidly evolving industrial landscape, achieving a smart factory environment and embracing sustainability are no longer optional but essential. ENGEL Japan actively proposes not only advanced hardware but also highly intelligent digital solutions, such as the iQ software series, which utilize real-time data to optimize injection processes. Furthermore, we champion technologies that significantly reduce energy consumption and promote the efficient use of resources. Through these initiatives, we empower our clients to achieve dramatic improvements in production efficiency while simultaneously minimizing their environmental footprint. Guided by the vision of creating a future where modern living and sustainability are seamlessly aligned, ENGEL Japan is committed to establishing new standards in plastics processing. We strive to be an indispensable partner to the Japanese manufacturing industry, driving business success and environmental stewardship through continuous technological innovation.

Company Details

Head Office

Japan

Main Business

射出成形機および周辺機器の販売、保守点検・技術サービスの提供、スペアパーツ販売、自動化およびデジタルソリューションの提供

President

磯部 孝志

Established

2019年

Capital

1億5000万円

Number of Employees

1 - 10
