Rollomatic Japan Ltd.

Company Description

Rollomatic SA, established in 1989 by Michel Rollier in Le Landeron, Switzerland, is a globally recognized premier manufacturer of high-precision CNC tool grinding machines, cylindrical grinding machines, and cutting-edge laser cutting equipment. Located in the heart of Switzerland's legendary Jura watchmaking region, the company has deeply inherited a culture of uncompromising precision and exceptional craftsmanship. Originally starting as a manufacturer of tungsten carbide tools and drills, Rollomatic leveraged its extensive hands-on machining expertise to transition into building the world's most advanced grinding machines.

Today, Rollomatic is synonymous with micron-level accuracy. The company specializes in the design and production of machinery engineered explicitly for machining extremely hard materials. Its innovative solutions are highly sought after across a multitude of high-tech industries, including medical device manufacturing, aerospace engineering, automotive production, telecommunications, and high-end horology. Furthermore, Rollomatic does not just supply hardware; it develops comprehensive, proprietary software solutions like VirtualGrind, enabling seamless programming, precise 3D simulations, and full integration into Industry 4.0 smart factory environments.

Recognizing the strategic importance and high quality standards of the Japanese manufacturing sector, the company established its official subsidiary, Rollomatic Japan Inc., in Nagakute City, Aichi Prefecture, in January 2023. Prior to this direct investment, over 1,000 Rollomatic machines had already been integrated into production lines across Japan through local distributors. The launch of the Japanese branch represents a major milestone, allowing Rollomatic to provide direct sales, customized engineering consultations, rapid technical support, and comprehensive maintenance services natively within the country.

By combining world-class Swiss engineering with a deeply localized customer service approach, Rollomatic Japan is actively empowering Japanese toolmakers and advanced manufacturing enterprises to push the boundaries of productivity and precision. The company's ongoing commitment to sustainable innovation, employee well-being, and technological excellence ensures that Rollomatic continues to shape the future of industrial manufacturing on a global scale.

Company Details

Head Office
Switzerland

Main Business
超硬合金などの硬質材料を加工する高精度CNC工具研削盤、円筒研削盤、レーザー切断機の設計・製造、および自社製専用ソフトウェア（VirtualGrindなど）の開発。

President
赤井 淳一

Established
2023年1月

Capital
10百万円

Number of Employees
1 - 10
